FIBER MANAGEMENT SYSTEM

OD Fibre Management Systems is designed to protect and route fibre optic patch cords, manage cable assemblies to and from network cabinets, ODF and other terminal devices. Plastic optical cable tray is the best solution for optical raceway requirements and application with pleasant appearance and quite easy maintenance. Two kinds of raw Material for option, ABS is environment friendly and high-class, PVC offers an relatively cheaper version for tight budget projects.

OD Fibre management system can be mounted from walls, ladder racks, strut channels, on raised floor support brackets, on floors, or to the top of equipment racks or frames.

Available sizes are 60*60,120*100,240*100, 360*100 and 600*100.

FIBER OPTIC RACEWAY

Fibre optic cords carry far more services and much greater throughput than traditional copper services and downtime or outages can cost tens of thousands of dollars per second in lost revenue for each cord damaged.

Good fibre protection is absolutely essential. Fibre cords are fragile and need to be correctly protected throughout any cabling installation from end to end. Traditional cable routing on open cable trays and ladders may cause damage to the delicate fibre cables. These methods of routing cables provide no protection for the exposed fibre.

CHARACTERISTIC

Fibre cords need to be segregated from all copper services and routed in enclosed raceway, clearly defined by means of a bright distinctive color. They also need protection against compression, and the minimum bend radius, generally specified as 30mm must not be compromised.

Labour costs incurred in installing cabling infrastructure in telecommunications exchanges or data centres can be very expensive if the system chosen is not easy to install.

All plastic based products used should be self-extinguishing to avoid the risk of harming staff, transmission equipment, rescuers or buildings in the case of a fire.

The need for zero down-time when using optical fibre. The system chosen should be easily changed or extended with the need to remove the existing fibre or shut down.

All plastic based products should be RoHS compliant.
